

Regional Business Performance & Analytics

Malaysia | Singapore | Indonesia

Umar Farid Bin Jalaluddin

Business Challenge

How can fragmented regional travel data be transformed into trusted, consistent management information and actionable commercial insight?

Approach

Capability Themes Demonstrated

About This Case Study

This project was created independently, using entirely synthetic booking, customer, supplier and finance data covering a simulated September 2024–August 2026 period across three markets. It was not requested by, and is not based on, any Peter Stuyvesant Travel systems, data or business results. Its purpose is to demonstrate an analytical operating model — defining trusted KPIs, understanding performance drivers, and translating findings into prioritised management action — that is transferable to a real regional environment.

Disclaimer: This independent case study was prepared solely for interview discussion and professional portfolio purposes. It uses entirely synthetic data and assumptions and does not represent Peter Stuyvesant Travel's actual systems, customers, suppliers, financial performance, KPIs, operations or business results.

CASE STUDY — PAGE 2

Regional Performance at a Glance

Executive Overview — full-period synthetic dashboard

Management Questions This View Answers

- Where is regional revenue performing, and how is it trending month to month?
- Which countries, products and channels contribute most to regional value?
- How concentrated is performance across the top customers and suppliers?
- Is comparable period-on-period growth being measured on a like-for-like basis?

All figures shown are computed from the synthetic dataset described on Page 1 and do not represent Peter Stuyvesant Travel's actual revenue, customers, suppliers or performance.

From Performance Signals to Management Action

Opportunities & Actions — Year 2026, Product: Air

The Analytical Chain

Rather than stopping at reporting, this page prioritises accounts by combining growth trend and digital adoption signals into a recommended commercial action:

Retention + Digital

Declining revenue and low digital adoption together — prioritised for combined retention and digital intervention.

Retention

Declining revenue with adequate digital adoption — prioritised for commercial retention review.

Digital Adoption

Stable or growing revenue but low online adoption — prioritised for digital enablement.

Monitor

No material decline or adoption signal — tracked but not prioritised for intervention.

The objective is not the dashboard itself, but a better management decision and an action whose outcome can subsequently be measured. All customer names, revenue figures and action categories shown are synthetic and do not describe any real Peter Stuyvesant Travel customer or account.
